Suzuki Samurai Tailgater Storage Bin with Optional Lockable Lid (SKU# SIB-TGOLL)

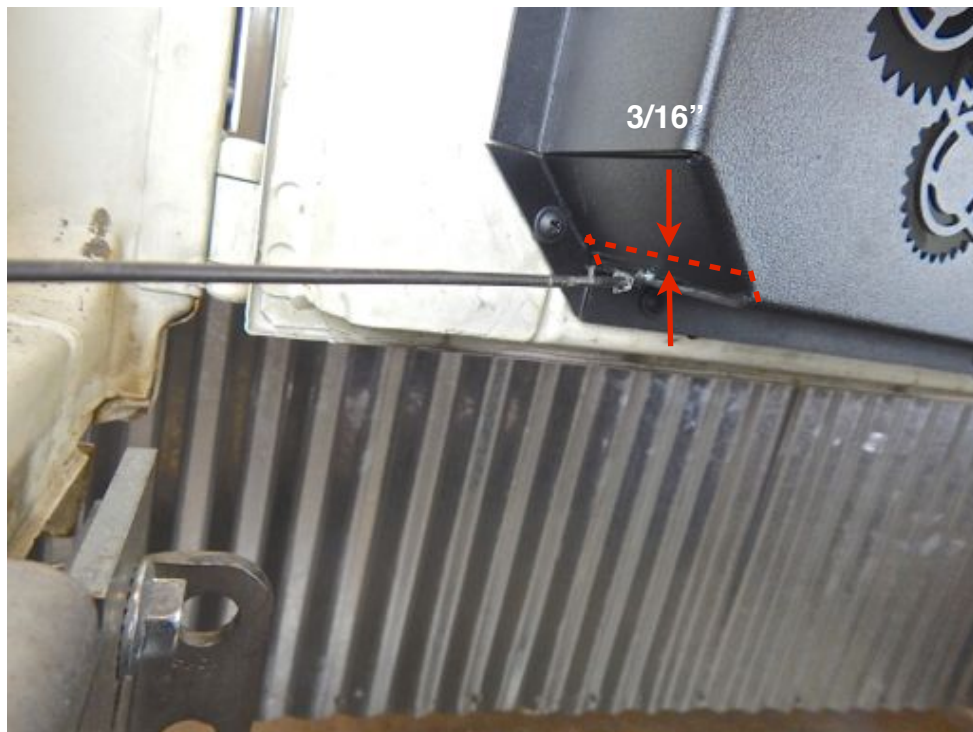

Technical Service Bulletin

Item 1

Our current Tailgater design does not accommodate the OEM tail gate restraint cable. If you would like to keep the OEM restraint cable, here is one solution. See Item 2

Item 2

Using a cut-off wheel Air Saw or Dremel® tool, enlarge the opening 3/16" as shown here. This job could be easier if the Tailgater was removed. Be sure to remove any burrs so the cable is not damaged over time due to rubbing. Additionally, you may want to put a little black paint on the exposed metal to reduce the risk of rust. The OEM cable will pass through this opening and work just fine.

Note: Our next generation of the "Tailgater" will have this wider gap already designed in it.
